Summary

DevOps and Linux systems engineer with over 10 years of professional experience. Full time Linux user since 2004. Proven track record in building scalable, secure infrastructures, automating systems, and optimizing environments for performance and cost efficiency. Specialized in containerization, CI/CD pipelines, and cloud architecture, with extensive expertise in AWS and Terraform.

Key Skills

- System Administration: Linux – 10+ years, Expertise: 4/5
- Database Management: SQL – 4 years, Expertise: 2/5
- Virtualization: Qemu/KVM – 2 years, Expertise: 4/5
- Cloud Platforms: AWS – 3 years, Expertise: 3/5
- CI/CD Pipelines: Jenkins – 2 years, Expertise: 4/5
- Configuration Management: Ansible, Saltstack, Puppet – 5 years combined, Expertise: 5/5 for Ansible/Saltstack, 3/5 for Puppet
- Scripting: Bash, Python – 9 years (Bash), 2 years (Python), Expertise: 4/5 (Bash), 2/5 (Python)
- Monitoring: Nagios, Zabbix – 6 years, Expertise: 4/5
- Monitoring (newer stack): Prometheus (including Telegram bot setup through AlertManager), Grafana – 2 years, Expertise: 3/5
- Infrastructure as Code: Terraform – 1 year, Expertise: 3/5
- Containers: Docker, Kubernetes – 2 years, Expertise: 4/5 (Docker)

Experience

Independent Linux DevOps Engineer

October 2019 - Present

- Designed and deployed a multi-site VPN solution using OpenVPN, providing automated backups and real-time monitoring for 5 geographically distributed sites.
- Automated infrastructure provisioning using Terraform and Ansible in AWS, optimizing deployment pipelines with Jenkins and Docker.

Clevertch – DevOps Linux Engineer

August 2020 – August 2022

- Engineered custom Docker images, streamlined Linux shell scripting, and implemented Jenkins-based CI/CD pipelines for AWS-based infrastructures.
- Introduced and managed cloud infrastructure with Terraform, reducing infrastructure setup times by 25%.

Softexpert – DevOps/Cloud Infrastructure

August 2019 – October 2019

- Built an SRE/DevOps culture, implemented automation stacks from scratch using Ansible, and reduced deployment bottlenecks.
- Led the introduction of Terraform and AWS infrastructure automation across multiple projects.

Older Positions

Gamevy/Glück Games – DevOps Linux Administrator

September 2018 – February 2019

- Managed Linux systems and built an OpenStack-based cloud, migrating from a co-location environment to the cloud.
- Automated infrastructure tasks using Saltstack and Ansible.

AQL – DevOps/Linux Systems Administrator

June 2018 – September 2018

- Solved Linux issues related to monitoring, automation, and documentation.
- Expanded Configuration Management automation using Saltstack.

Goodgame Studios – Linux Systems Administrator

July 2016 – June 2017

- Migrated storage pools within a production KVM hypervisor with minimal downtime (less than one minute per VM).

Humantech Knowledge Management – Linux Systems Administrator

September 2014 – February 2015

- Planned and deployed Configuration Management using Saltstack on AWS Redhat servers, reducing downtime and improving configuration control.

Noris Network AG – Linux Systems Administrator

February 2014 – April 2014

- Set up new user accounts and resolved internal customer tickets. Managed Unix services and automated administrative tasks.

Netzmarkt GmbH – Linux Systems Administrator

October 2013 – November 2013

- Migrated Puppet Configuration Management to Chef, developing custom Ruby scripts to manage configuration and deployment.

Jagex Games Studio – Linux Systems Administrator

December 2012 – October 2013

- Deployed new game versions, managed Hadoop nodes, and automated Linux system configuration using Bash and bcfg2.

Federal University of St. Catarina – General IT Technician

June 2012 – December 2012

- Built file servers and implemented backup solutions using Bash scripting, improving data availability and reliability.

State Board of Health – General IT Technician

January 2012 – May 2012

- Built a Debian file server with automated backup scripts, enhancing file storage efficiency and data security.

HSBC Global Technology Brazil – Unix Application Support

April 2011 – December 2011

- Provided Unix application support, debugging log files and automating tasks using Bash scripting and SQL.

Education

Postgraduate in Information Security

SENAC, 2024

Associate/Technology Degree in Computer Networks

SENAI, 2010

BSc Computer Science (in progress)

Uninter, 2024-2028

Certifications

CompTIA Network+ (Expired)

[LPIC-2](#)

[EF SET English C2 LEVEL 77/100](#)
